

Quality Assurance Manager
integraSoft, Inc.
Bettendorf, IA

integraSoft, Inc is a leader in strategic application software for the hard goods distribution and manufacturing industries. We've been in business for over 30 years, helping customers grow with business solutions. Our core suite of products focuses on business functions (Accounting, Inventory, Payroll, Order Entry, Ecommerce, Mobile Sales Automation) for small to medium business customers. Our product suite is primary web based with a growing foundation of exciting mobile solutions. We are a Microsoft partner and incorporate Microsoft cloud technology (Azure & Office 365) into our solutions. integraSoft is a growing company building innovative leading edge solutions for our customers.

We are seeking a Quality Assurance Manager to manage a talented group of quality assurance resources who are focused on automated and manual testing activities. You will help us ensure continued and improved quality for our products and services enabling customers to maximize the value of our solutions. This position provides an excellent opportunity to exercise your current skills and expand your technical knowledge through your active participation in development and iterative release cycles. You will be part of our engineering team and leverage the application development and lifecycle management processes we utilize to build real world applications. Let's GROW together!

Key Responsibilities include:

- Management of a talented group of quality assurance resources who are focused on automated and manual testing activities.
- Direct the development of Test Automation to test cloud or on premise deployed version of our projects.
- Lead technical validation strategies and infrastructure design to enable testing.
- Provide feedback on key user scenarios, technical designs, and specifications.
- Define and report on key scenario measures, performance, and quality metrics.

Qualifications Include:

- People/Team management experience, preferably in a technical environment.
- Ability to collaborate with others to design and implement testing solutions that ensure quality to support product features envisioned by product management or as needed by development team.
- Robust practical experience with modern quality testing methodologies/techniques.
- Minimum 3 years experience creating test automation for graphically rich and user optimized web user interfaces developed in HTML5, CSS and JSP, utilizing test automation tools such as Selenium IDE, Selenium web driver, Test Complete or Test Studio. Experience testing IOS or Android platform applications preferred.
- Minimum 1 year experience with doing load and performance testing.
- Minimum 1 year experience testing responsive UI applications across multiple devices (tablet, phone or PC).
- Minimum 1 year experience testing Web services (SOAP or RestFUL) using SoapUI or JUNIT.

- Minimum 2 years' experience with scripting languages used for automation such as JavaScript, PowerShell, Windows BAT/CMD or Bash Scripts.
- Experience utilizing TFS or Visual Studio online for source code control across multiple projects.
- Experience with Agile or other contemporary software development methodologies.
- A Bachelor-level degree or higher in Computer Science or other relevant discipline. Equivalent professional experience may be considered.
- Strong verbal and written communication skills.
- Outstanding teaming and collaboration skills.
- Excellent problem solving skills.
- Passion for technology and learning new things related to technology.

integraSoft offers a competitive compensation package, including healthcare benefits and a 401(k) plan with a possibility for employer matching. Our work environment is professional, yet casual. More company info can be found at: <http://www.integrasoft.com>
